Goal #2: The percentage of people who test positive for Chlamydia in the LLCHD STI Clinic and who have a subsequent positive Chlamydia infection within six months, will be no higher than the percentage in Lancaster County.

Outcome:

- **Baseline Year, 2012: LLCHD STI Clinic reinfections: 13.3%, Lancaster County reinfections: 9.9%**
- **1st Year, 2013: LLCHD STI Clinic reinfections: 3.2%, Lancaster County reinfections: 10.9% - goal exceeded!!!!**

All clients who visit LLCHD's STI Clinic and receive medication for Chlamydia, receive a telephone call within 1-2 business days from a nurse to assess:

- 1) Tolerance of medication treatment,
- 2) Abstinence from sexual contact since they were treated at LLCHD with medication, and
- 3) Testing for sexual partners.

Patients are referred again to LLCHD's STI Clinic if they did not tolerate their medication, if their sexual partner(s) have not been tested for Chlamydia, and if they have not remained abstinent from sexual contact. Standard education includes abstinence from sexual contact for 7 days after the patient and sexual partners have been treated.

- 257 unique patients were assessed.
- 3 patients reported "not tolerating treatment". 98.9% of patients tolerated treatment.
- 94% of patients said they were abstinent from sexual contact since their STI Clinic visit at the time of follow-up, which is 1-2 business days after their STI Clinic visit.
- 45% of patients said their sexual partner(s) were tested for Chlamydia at the time of follow-up.
